

Whether you are developing residential properties or operating a commercial business, an investment in outdoor lighting pays off. First, it helps protect your larger investment. Second, it helps increase the public's awareness of, and attraction to, your business.

Residential

Security is an important consideration for home buyers today, and the right outdoor lighting can increase their perceived value of your property. It provides protected islands of light along streets and around homes at night while adding to the property's visual appeal even in the daylight hours.

Commercial

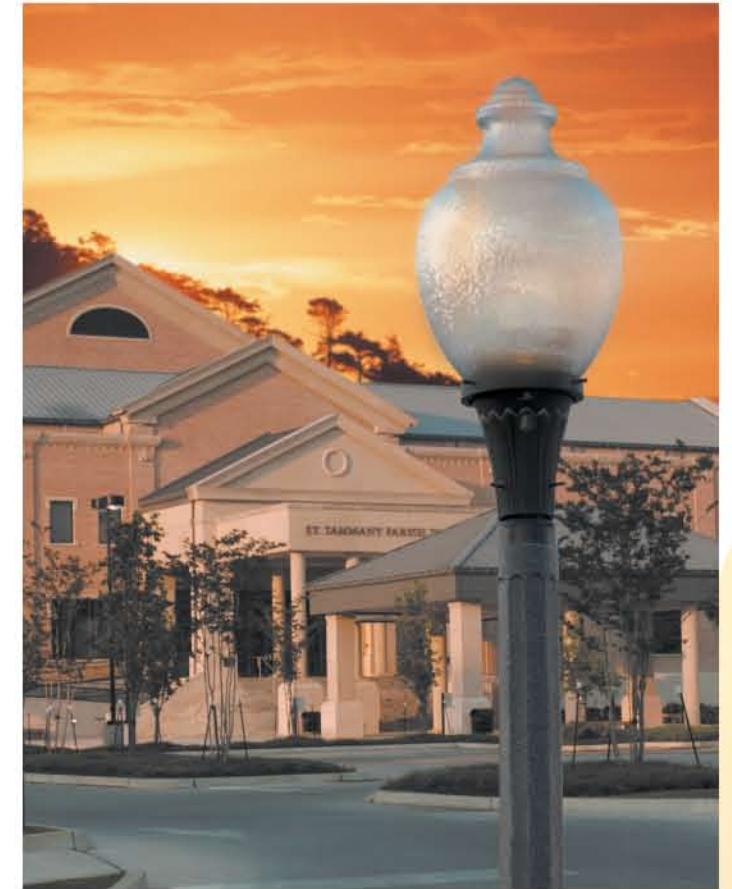

Research shows that the effective use of outdoor lighting attracts customers while it reduces the risk of theft and vandalism. It can be a cost effective security system that not only protects your customers, employees and property from crime, but also advertises your business all night long - even after closing.

Call Cleco Today

After your free evaluation, Cleco will install the fixtures and maintain them for a low monthly fee.

HPS (High Pressure Sodium)
Lamps that produce the highest number of lumens per watt.

Often used to illuminate areas that place more emphasis on efficiency than color. They create a yellow glow.

MH (Metal Halide)
lamp produces a clean, white glow.

While not as high in efficiency as the HPS, they are dependable, efficient and attractive.
